## OBJECTIVE

Full-stack developer with extensive freelance experience in React, Node, PHP, and Python, delivering tailored web solutions across diverse industries. Skilled in requirement analysis, reverse engineering, and bug-fixing, with a strong background in automotive and banking software enhancements.

## TECHNOLOGIES

**Programming Languages:** PHP, C, C++, JavaScript, Java, Python, SQL, HTML, CSS

**Web & App Development:** React, Angular, React Native, Node.js, Flask, Django, .Net

**Frameworks & Libraries:** CodeIgniter, Laravel, Bootstrap, Tailwind CSS

**Testing Frameworks:** Jest, Selenium

**Databases:** MySQL, SQLite, Firebase, Supabase

**Cloud & DevOps Tools:** AWS (EC2, SES), SendGrid, CI/CD Pipelines, Docker, Nginx

**Version Control:** Git, Perforce, GitHub

**Tools and Management:** Splunk, Jira, ServiceNow, MS Office

## EXPERIENCE

**Software Development Engineer II**, **Redeemer Technologies**, (Contract) Sept 2025 – Present

- Designing, developing, and maintaining web applications using PHP, React, Next.js, Node.js, NestJS, and Django.
- Working with databases including MySQL, PostgreSQL, SQLite, Supabase, and Firebase, ensuring efficient data modeling, storage, and performance optimization across applications.
- Building and enhancing modules related to user management, workflow automation, reporting, and real-time data tracking.
- Developing and integrating REST APIs and handling third-party service integrations.
- Collaborating with cross-functional teams to ensure smooth feature delivery, performance optimization, and issue resolution.
- Working alongside the DevOps team using Docker-based environments to support deployment, testing, and system reliability.
- Conducting code reviews, debugging issues, and optimizing applications to improve stability and scalability.

**Software Development Engineer II**, HARMEN & BOTTS(Contract) April 2025 – Sept 2025

- Maintained and optimized the company's core platform built with PHP(Laravel), ensuring high performance, stability, and security across deployments.
- Led the development and integration of a mass email campaign system, configuring SMTP servers and optimizing email delivery using tools like AWS SES and SendGrid.
- Spearheaded the migration of the legacy platform to a modern React, Next.js, Node.js, and Python stack, significantly improving scalability, maintainability, and development speed.
- Designed and implemented CI/CD pipelines, automating build and deployment workflows to enable continuous integration between Git repositories and production servers.
- Proactively identified and resolved server-level and infrastructure issues, minimizing downtime and improving overall system reliability.
- Managed and mentored a cross-functional development team, fostering collaboration, code quality, and efficient project delivery.

**Software Development Engineer, Redeemer Technologies**, (Contract) Apr 2024 – April 2025

- Developed and maintained full-stack web applications using React, Node.js, and Python, delivering scalable, high-performance solutions across multiple client projects.
- Supported and enhanced PHP-based applications (Laravel and CodeIgniter), ensuring seamless integration with newer systems and improving site efficiency and security.
- Collaborated with the DevOps team to configure and maintain AWS infrastructure, implement CI/CD workflows, and manage Redis caching, MySQL databases, and environment optimizations.
- Integrated email delivery systems using AWS SES and SendGrid, improving campaign and communication reliability.
- Implemented automated testing with Jest, strengthened code quality through rigorous debugging, and increased application reliability by over 40%.
- Architected and integrated RESTful APIs for internal and third-party services, ensuring secure, efficient, and maintainable communication between distributed systems.

**Associate System Analyst**, Envestnet Yodlee Dec 2021 – Oct 2022

- Ensured stability and performance of Java-based enterprise platforms by performing root cause analysis, issue triaging, and in-depth debugging of production incidents.
- Conducted regression, functional, and integration testing, ensuring consistent application performance across multiple system releases.
- Utilized Splunk for log analysis and performance monitoring, enabling early detection of anomalies and improved system reliability.
- Enhanced team efficiency through effective use of Perforce, Jira, and ServiceNow for version control, issue tracking, and workflow management.
- Collaborated with cross-functional teams to streamline incident resolution and post-release validation, minimizing downtime and improving overall user satisfaction.

**Freelance Developer**, (Self, Redeemer Technologies, Futurzy, Adbullet) Mar 2021 – Present

- Delivered diverse web projects on time and within budget using React, Node.js, Python, PHP (CodeIgniter, Laravel), Django, Tailwind CSS, MySQL, and REST APIs..
- Maintained and optimized client applications to deliver faster performance and better user experience.
- Implemented CI/CD workflows and streamlined deployment, reducing release issues by 30% and accelerating delivery cycles.
- Conducted testing, debugging, and performance tuning, enhancing site reliability by 40% across various platforms.
- Partnered with cross-functional teams and clients to build scalable, user-focused digital solutions aligned with business goals.

## INTERNSHIPS

**Intern,** Tata Elxsi Oct 2023 – Apr 2024

- Developed and reverse-engineered automotive test cases using flow diagrams and requirement documents, and implemented Python-based ML scripts to verify test case accuracy and detect anomalies.
- Designed and validated suspension and chassis system models, integrating data-driven insights to enhance design precision and system reliability.
- Built Python automation tools to preprocess and analyze test data, reducing manual effort and improving validation efficiency.
- Assisted in requirement engineering and functional safety documentation in line with ISO 26262 standards for automotive software systems.
- Collaborated in Agile sprints and prototype reviews, contributing to faster iteration cycles and improved code quality and test automation across projects.

**Intern, IT Department**, Abarna Colours Apr 2023 – Jun 2023

- Spearheaded the modernization of in-house ERP and CRM systems, migrating from PHP (CodeIgniter) to a React and Node.js architecture to improve scalability, maintainability, and performance.
- Integrated and optimized REST APIs for seamless communication between modules, enhancing data flow and system efficiency.
- Collaborated with the DevOps team to implement CI/CD workflows and configure databse for improved deployment reliability
- Conducted comprehensive testing, debugging, and performance tuning, ensuring stable production releases and reduced downtime.
- Enhanced overall UI/UX and user workflows, contributing to a smoother, faster, and more secure operational experience.

## EDUCATION

**College of Engineering Chengannur**, Master of Computer Applications Oct 2022 – May 2024
Major: Computer Applications

**Naipunnya School Of Management**, Bachelor of Computer Applications Jun 2018 – May 2021
Major: Computer Application

## PROJECTS

**Enterprise Platform**

- Enterprise-level system for managing large-scale student and candidate data, with modules for application tracking, communication management, and mass email campaigns.
- Handles over 1.5 million records with optimized database architecture for scalability. Also includes Mail Campaign Manager (MCM) capable of supporting 4,000+ emails in a single go via AWS SES, SendGrid.
- Integrated MailViewer, chat, resume parser, and counsellor tracking modules.
- Tech Stack: React.js, Node.js, MySQL, Redis, AWS, SendGrid, SES

**Newsletterly** Newsletterly - Link

- A newsletter email creation application that generates automated newsletter content with template integration and AI-generated content via OpenAI and News API integration. It sends email newsletters.
- **Tech Stack:** React.js, Node.js, Tailwind CSS

**Hospital Website with CMS** Hospital - Link

- A hospital website with booking management and real-time notifications via messaging (Twilio).
- Tech Stack: React.js, Django

**Complete Summarizer** Summarizer - Link

- Summarizes video and text content using TF-IDF and a fine-tuned BART model.
- Tech Stack: Python, Flask

**Automated Portfolio Website Builder** Portfomeister - Link

- A platform that allows users to build and customize their portfolio websites using a drag-and-drop editor for easy template editing and layout adjustments, providing a seamless experience without coding.
- Tech Stack: React.js, Node.js

**ERP + Inventory Management System** ERP+CRM - Link

- A comprehensive ERP system for employee, stock, booking, and delivery management with real-time updates via mail(Nodemailer).
- Tech Stack: React.js, Node.js

**Wind Ridge Tools** Wind-Ridge - Link

- Java-based bus ticket management application for multi-branch travel agencies, including booking, admin console, and branch-level monitoring.
- Tech Stack: Java, MySQL
